IMPROVEMENT IN THE STABILISATION OF
HALOVINYL RESINS

a Abridgement *ABSTRACT OF THE DISCLOSURE*

Improvement in the stabilisation to heat, shock and light
of resins incorporating a halogen.

In addition to a metal compound, an organic acid ester is
incorporated in the resin, in which the mercaptan function
is joined to a carbon atom of the alcohol residue of this
ester.

An important application is the stabilisation of polyvinyl
chloride or modified polyvinyl chloride.
